Profile

I am a Latino woman that came to this country in 1992 already with a residence visa. Later, in 2000, I became citizen of the United States of America. I grew up in my mother's business, a kindergarten, and as a teen I worked for her during summers. My passion for teaching comes from a line of educators and engineers who love what they do and always end up as instructors of some sort.

Writing about oneself I found is hard. I like what I do, I engage with my students not only in the classroom but also, I am interested in their mental and physical health. I engage with parents and guardians that are the base for everything we as teachers do. I tried to convey self-esteem in my students socially and in their ability to find answers to their own challenges at school and in their young lives. I truly believe there is no success without a path of love and respect for yourself.

Many times, I ask myself the question of why I stayed as a teacher and did not take a path of better monetary rewards. I enjoy what I do because I learn something new from my students. They drive me to stay and be a better person and a better teacher. I have tried to leave a few times, but I cannot see myself doing something else other than helping new generations to value themselves and push them to new horizons.

Experience

DRAFTING & AUTOCAD INSTRUCTOR | ERWIN TECHNICAL COLLEGE| 2002-2005

- I brought my experience as an architecture candidate to my adult students. My experience with design and drafting skills helped my students compete in Skills USA several times.

SURVEYING & MAPPING INSTRUCTOR | ERWIN TECHNICAL COLLEGE| 2007-2009

- I brought my experience as a civil engineer senior drafter designer to my adult students that wanted to retrain in other areas of construction. We competed in CANstruction against USF students of engineering and University of Tampa, obtaining second place, 2008. All food cans were donated to Metropolitan Ministries.

MATHEMATICS TEACHER | CHAMBERLAIN HIGH SCHOOL | 2013-2017

- I decided after staying home with my children that I wanted to become a mathematics teacher, so I took the certification and became one. I was here the teacher for the bi-lingual population, teaching algebra and Geometry.

MATHEMATICS - ROBOTICS TEACHER | STEWART MIDDLE MAGNET | 2018 - PRESENT

- I moved to teach at Stewart as part of the Mathematics Academy program. A year later, the position of robotics opened, and I was able to take it because of my background experience in architecture, civil engineering, and mathematics, teaching Aerospace technology, Exploring Technology, Exploring Robotics Technology, and Foundations of Robotics (high school credit class).
